

LC1215

16V 500mA Low Consumption Linear Regulator

DESCRIPTION

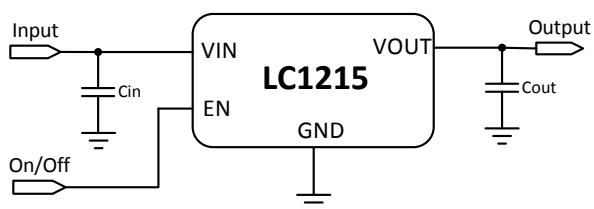

LC1215 series is a group of positive voltage output, low power consumption, low dropout voltage regulator. It can provide 300mA output current when input / output voltage differential drops to 600mV ($V_{out} = 3.3V$), and it also provides foldback short-circuit protection, thermal protection and output current limit function. The very low power consumption of LC1215 ($I_Q = 10\mu A$) can greatly improve natural life of batteries.

LC1215 can provide output value in the range of 1.2V~5.0V in 0.1V steps. It also can customize on command.

LC1215 includes high accuracy voltage reference, error amplifier, current limit circuit and output driver module.

LC1215 has well load transient response and good temperature characteristic, And it uses trimming technique to guarantee output voltage accuracy within $\pm 2\%$.

TYPICAL APPLICATION

NOTE: Input capacitor ($C_{in}=1\mu F$) and Output capacitor ($C_{out}=1\mu F$) are recommended in all application circuit.
Ceramic capacitor is recommended.

BLOCK DIAGRAM

EXPLANATION

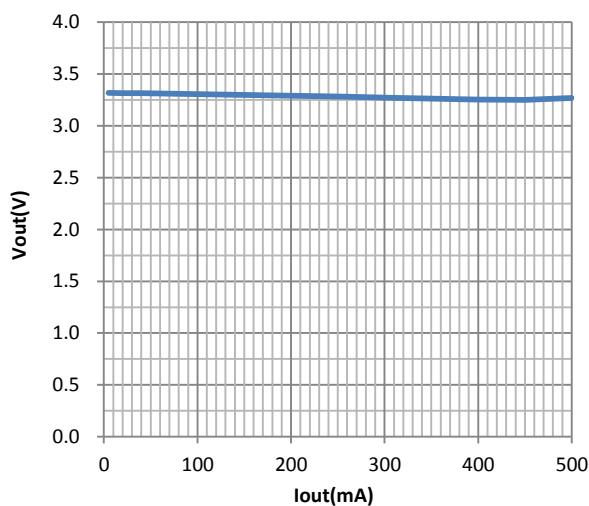

LC1215 is a series of low dropout voltage and low power consumption regulator. Its application circuit is very simple, which only needs two outside capacitors. It is composed of these modules: high accuracy voltage reference, current limit circuit, error amplifier, output driver and power transistor.

Current Limit module can keep chip and power system away from danger when load current is more than 500mA.

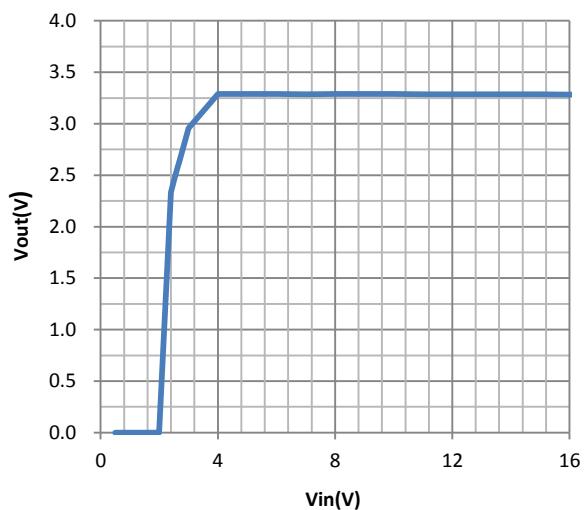

LC1215 uses trimming technique to assure the accuracy of output value within ±2%, at the same time, temperature compensation is elaborately considered in this chip, which makes LC1215's temperature coefficient within ±100ppm/°C.
